

AI-powered solutions in Healthcare

TEAM

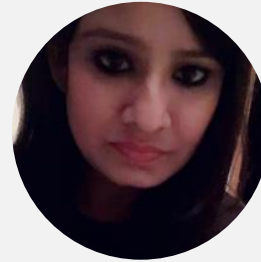

Technical Founder

Dr. Ankit Shukla

AI in Medicine from
Queensland
Medical School UQ, Brisbane

Strong Foundation

Saumya Shukla

Co-founder & CEO

PhD, Public Health (Sanjay Gandhi Postgraduate Institute of Medical Sciences) - MBA - NUS business school | Data science - Harvard medical school

Nikhil Mishra

CTO

Researcher in AI and Machine Learning as applied to Medicine from IIT Kanpur

Global Clinical talent

Dr Alok Nath

Head of Department,
SGPGI Hospital,
Lucknow

Dr. Zia Hashim

Associate Professor,
SGPGI Hospital,
Lucknow

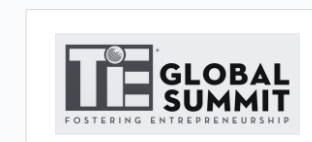

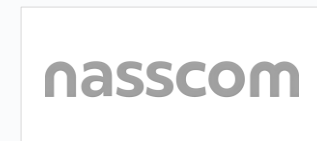

Dr Ajmal Khan

Dr. Prasanth A P

National and Global Recognition International spotlight

- Tie Global Quebec Market Access Winner, Amongst India Tie Global GITEX Cohort, Dubai
- Product & Technology Winner at DTU, Copenhagen, Denmark
- Most Promising Startup Award by IIT Delhi & BHIMTECH Noida, India and Tie Global University, New York
- First Winner at Assocham Lucknow
- Second Winner at UP Startup Conclave, Lucknow, Uttar Pradesh
- Awarded CPS Accelerator Grant at IIT Mandi Catalyst
- Incubated at MedTech, SGPGI Hospital, Lucknow and IIT Mandi Catalyst and BHIMTECH Noida
- Collaborations : Google Brain Team, Apollo Hospitals Hyderabad, Sgpgi Hospital Lucknow, IIT Mandi, NASSCOM, IIT Kanpur

COMPREHENSIVE RESPIRATORY SCREENING AND DIAGNOSTIC ASSISTANCE TOOL – DECXPERT

Name : Dr. **Sanchit Garg**
Diagnosed with Cancer at very
late stage

**Timely detection could have
saved his life**

IMPACT STORY

Problem Statement

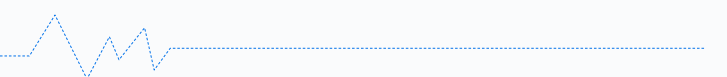

India's Radiology Crisis: A Life-Threatening Gap

With **just 1 radiologist per 1,25,000 people**, India faces a catastrophic diagnostic challenge—

7–10-day delays and 40% misdiagnosis rates in chest X-ray interpretation leading to loss of lives as **chest X-ray is a critical front-line tool to detect lung diseases.**

Radiologists earn only ₹25–30 per chest X-ray reading compared to Rs. 2,000–10,000 for MRI, CT-scan and PET images, **driving them away from critical diagnostic work with chest X-rays.**

Additionally, analog black bulky film printing of chest X-rays further slows down the workflow

Conquer Critical Respiratory Conditions through AI/ML

AI-based respiratory diagnostics solution – **DECXPERT**

Online and Offline version AI software integrated into the computer controlling X-ray machine

10 X decrease in turnaround time

Patient is able to check if their treatment is actually working?

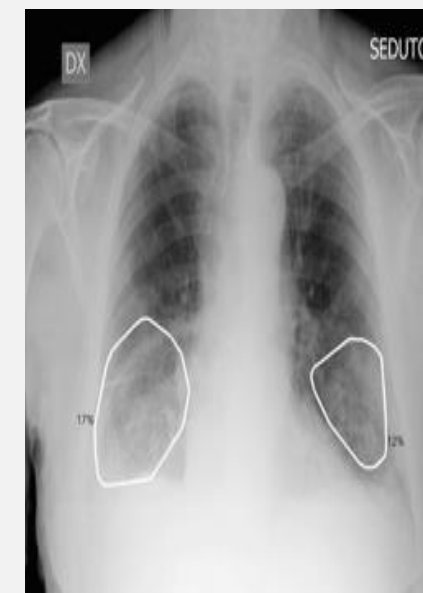

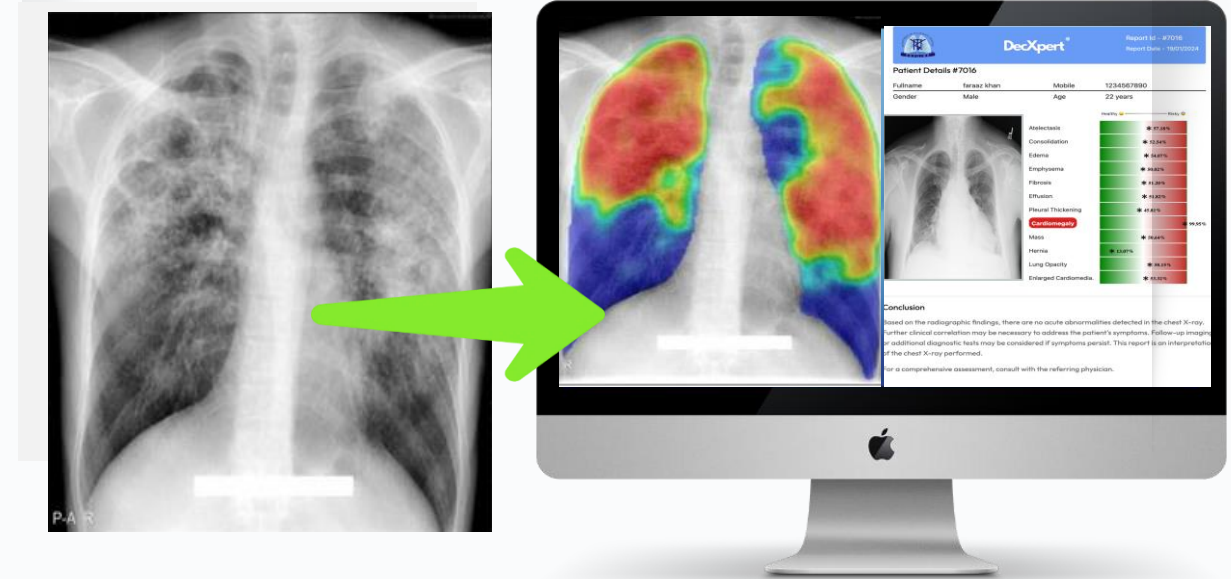

1

Interprets 18 Critical Chest Conditions

Lung cancer,
Tuberculosis,
Pneumonia, COPD
and 14 other critical
respiratory conditions

2

No black film scan printing and **complete digital reporting** saving cost and cutting reporting time

WHO Approves CAD software for CXR Interpretation

Type of case and type of reader	Accuracy estimate range	
	Sensitivity	Specificity
WHO target product profile	> 0.90	> 0.70
Screening use case		
CAD software	0.90–0.92	0.23–0.66
CXR with human reader	0.82–0.93	0.14–0.63
Triage use case		
CAD software	0.90–0.91	0.25–0.79
CXR with human reader	0.89–0.96	0.36–0.63

CAD: computer-aided detection; CXR: chest X-ray.

Conquer Critical Respiratory Conditions through AI/ML

AI-based respiratory diagnostics solution

Study Published – Nature Scientific Reports

<https://www.nature.com/articles/s41746-023-00829-4>

AI Training Cohort– 1 Million Individual Patients

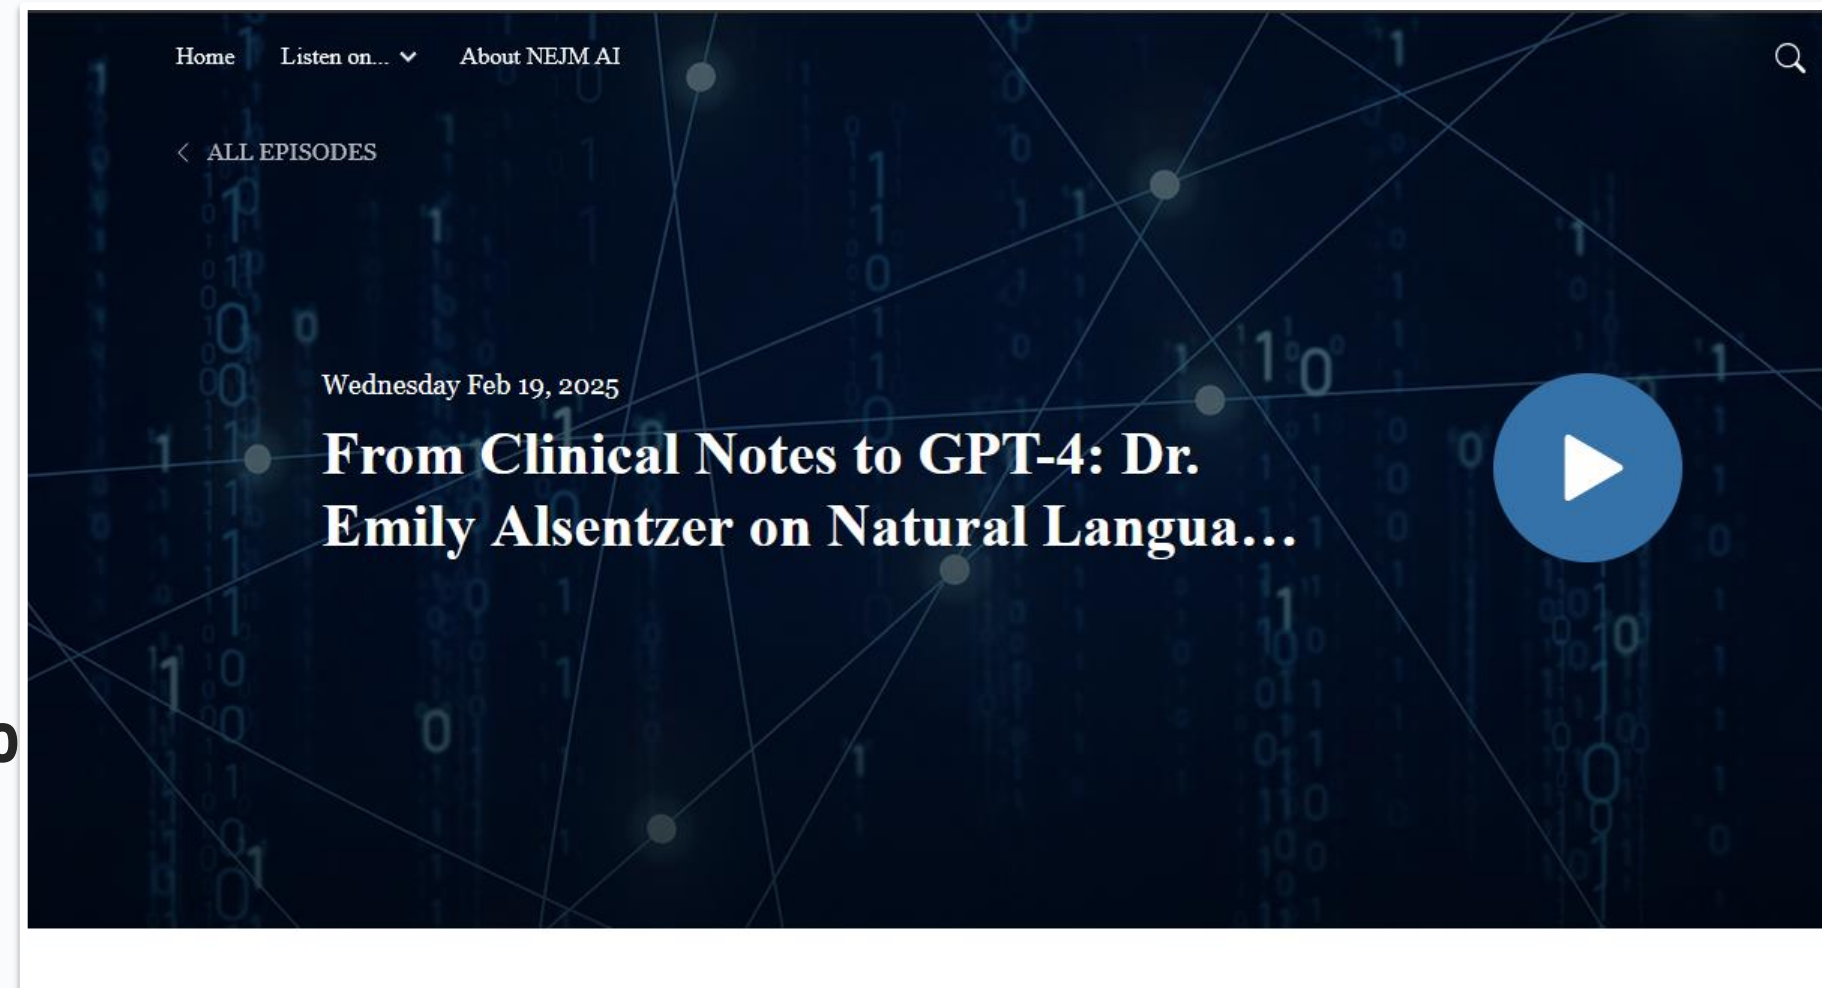

AI Validation Cohort– 500,000 Individual Patients

50%

more chest x rays can be screened earlier

+52.8%

More patients able to check if treatment is working

Results

Metric	Value	95% CI
Sensitivity	88%	0.85–0.93
Specificity	85%	0.82–0.91
AUC	0.91	0.88–0.94

Technical Edge

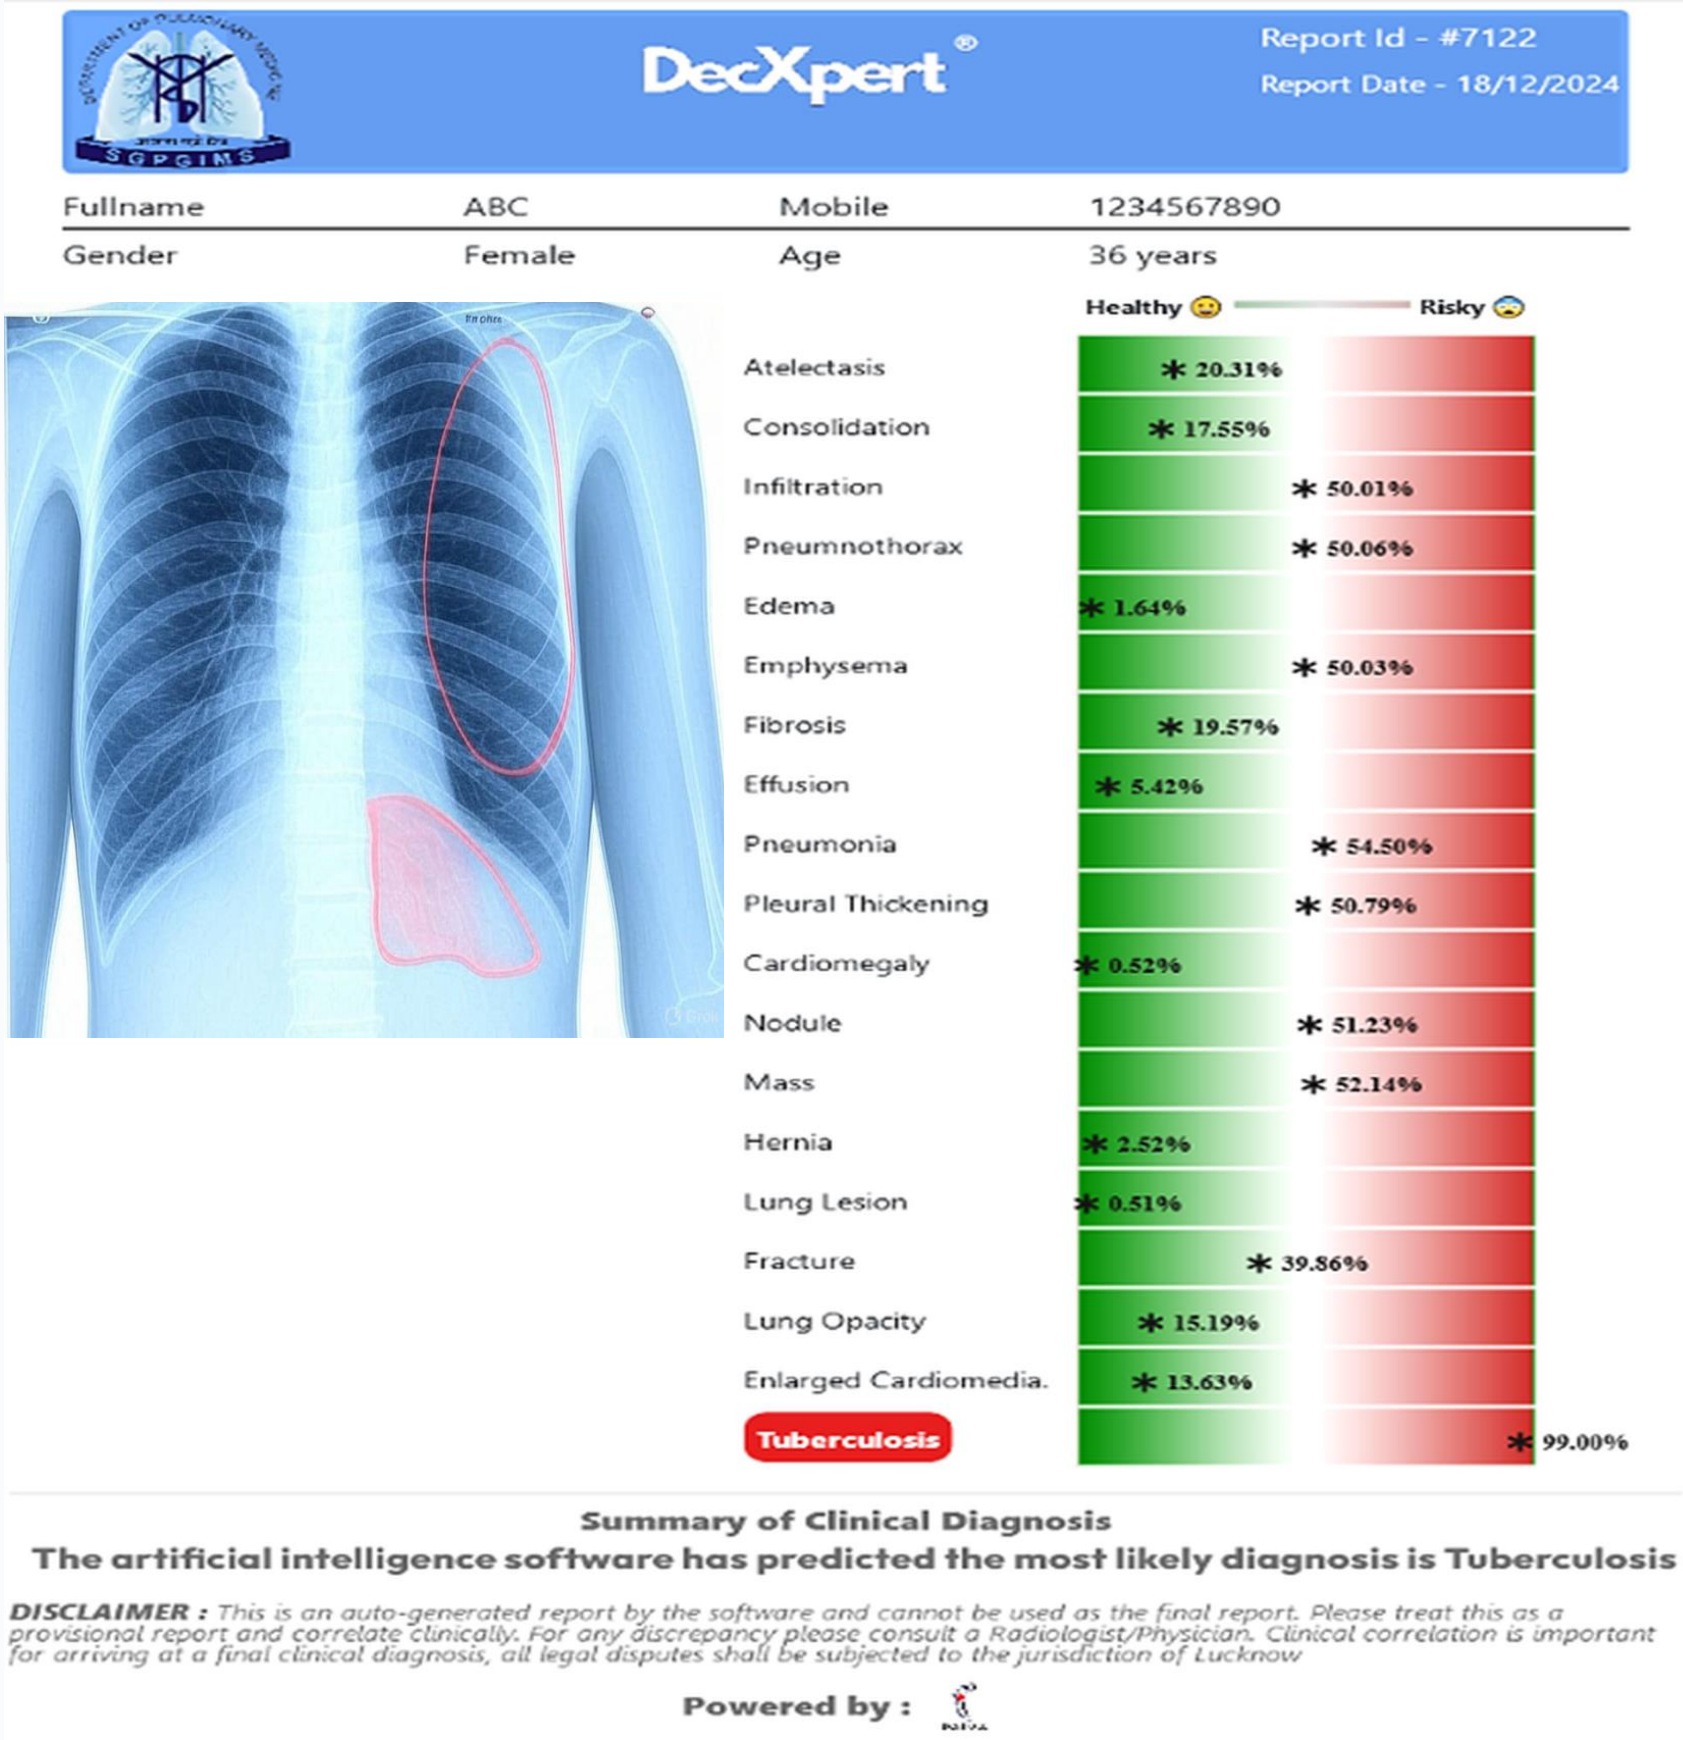

- 1) **Self-learning multimodal architecture that adapts to regional variations in X-ray data from very diverse X-ray manufacturer vendors**, incorporates feedback, and improves accuracy through semi-supervised learning.
- 2) **With local computing**, it ensures low latency, robust noise handling, and **seamless integration into existing clinical workflows, unlike cloud-dependent solutions**

Product Fully Licensed and Clinical Validation Approved by Central Drugs Standard Control Organization of India (CDSCO)

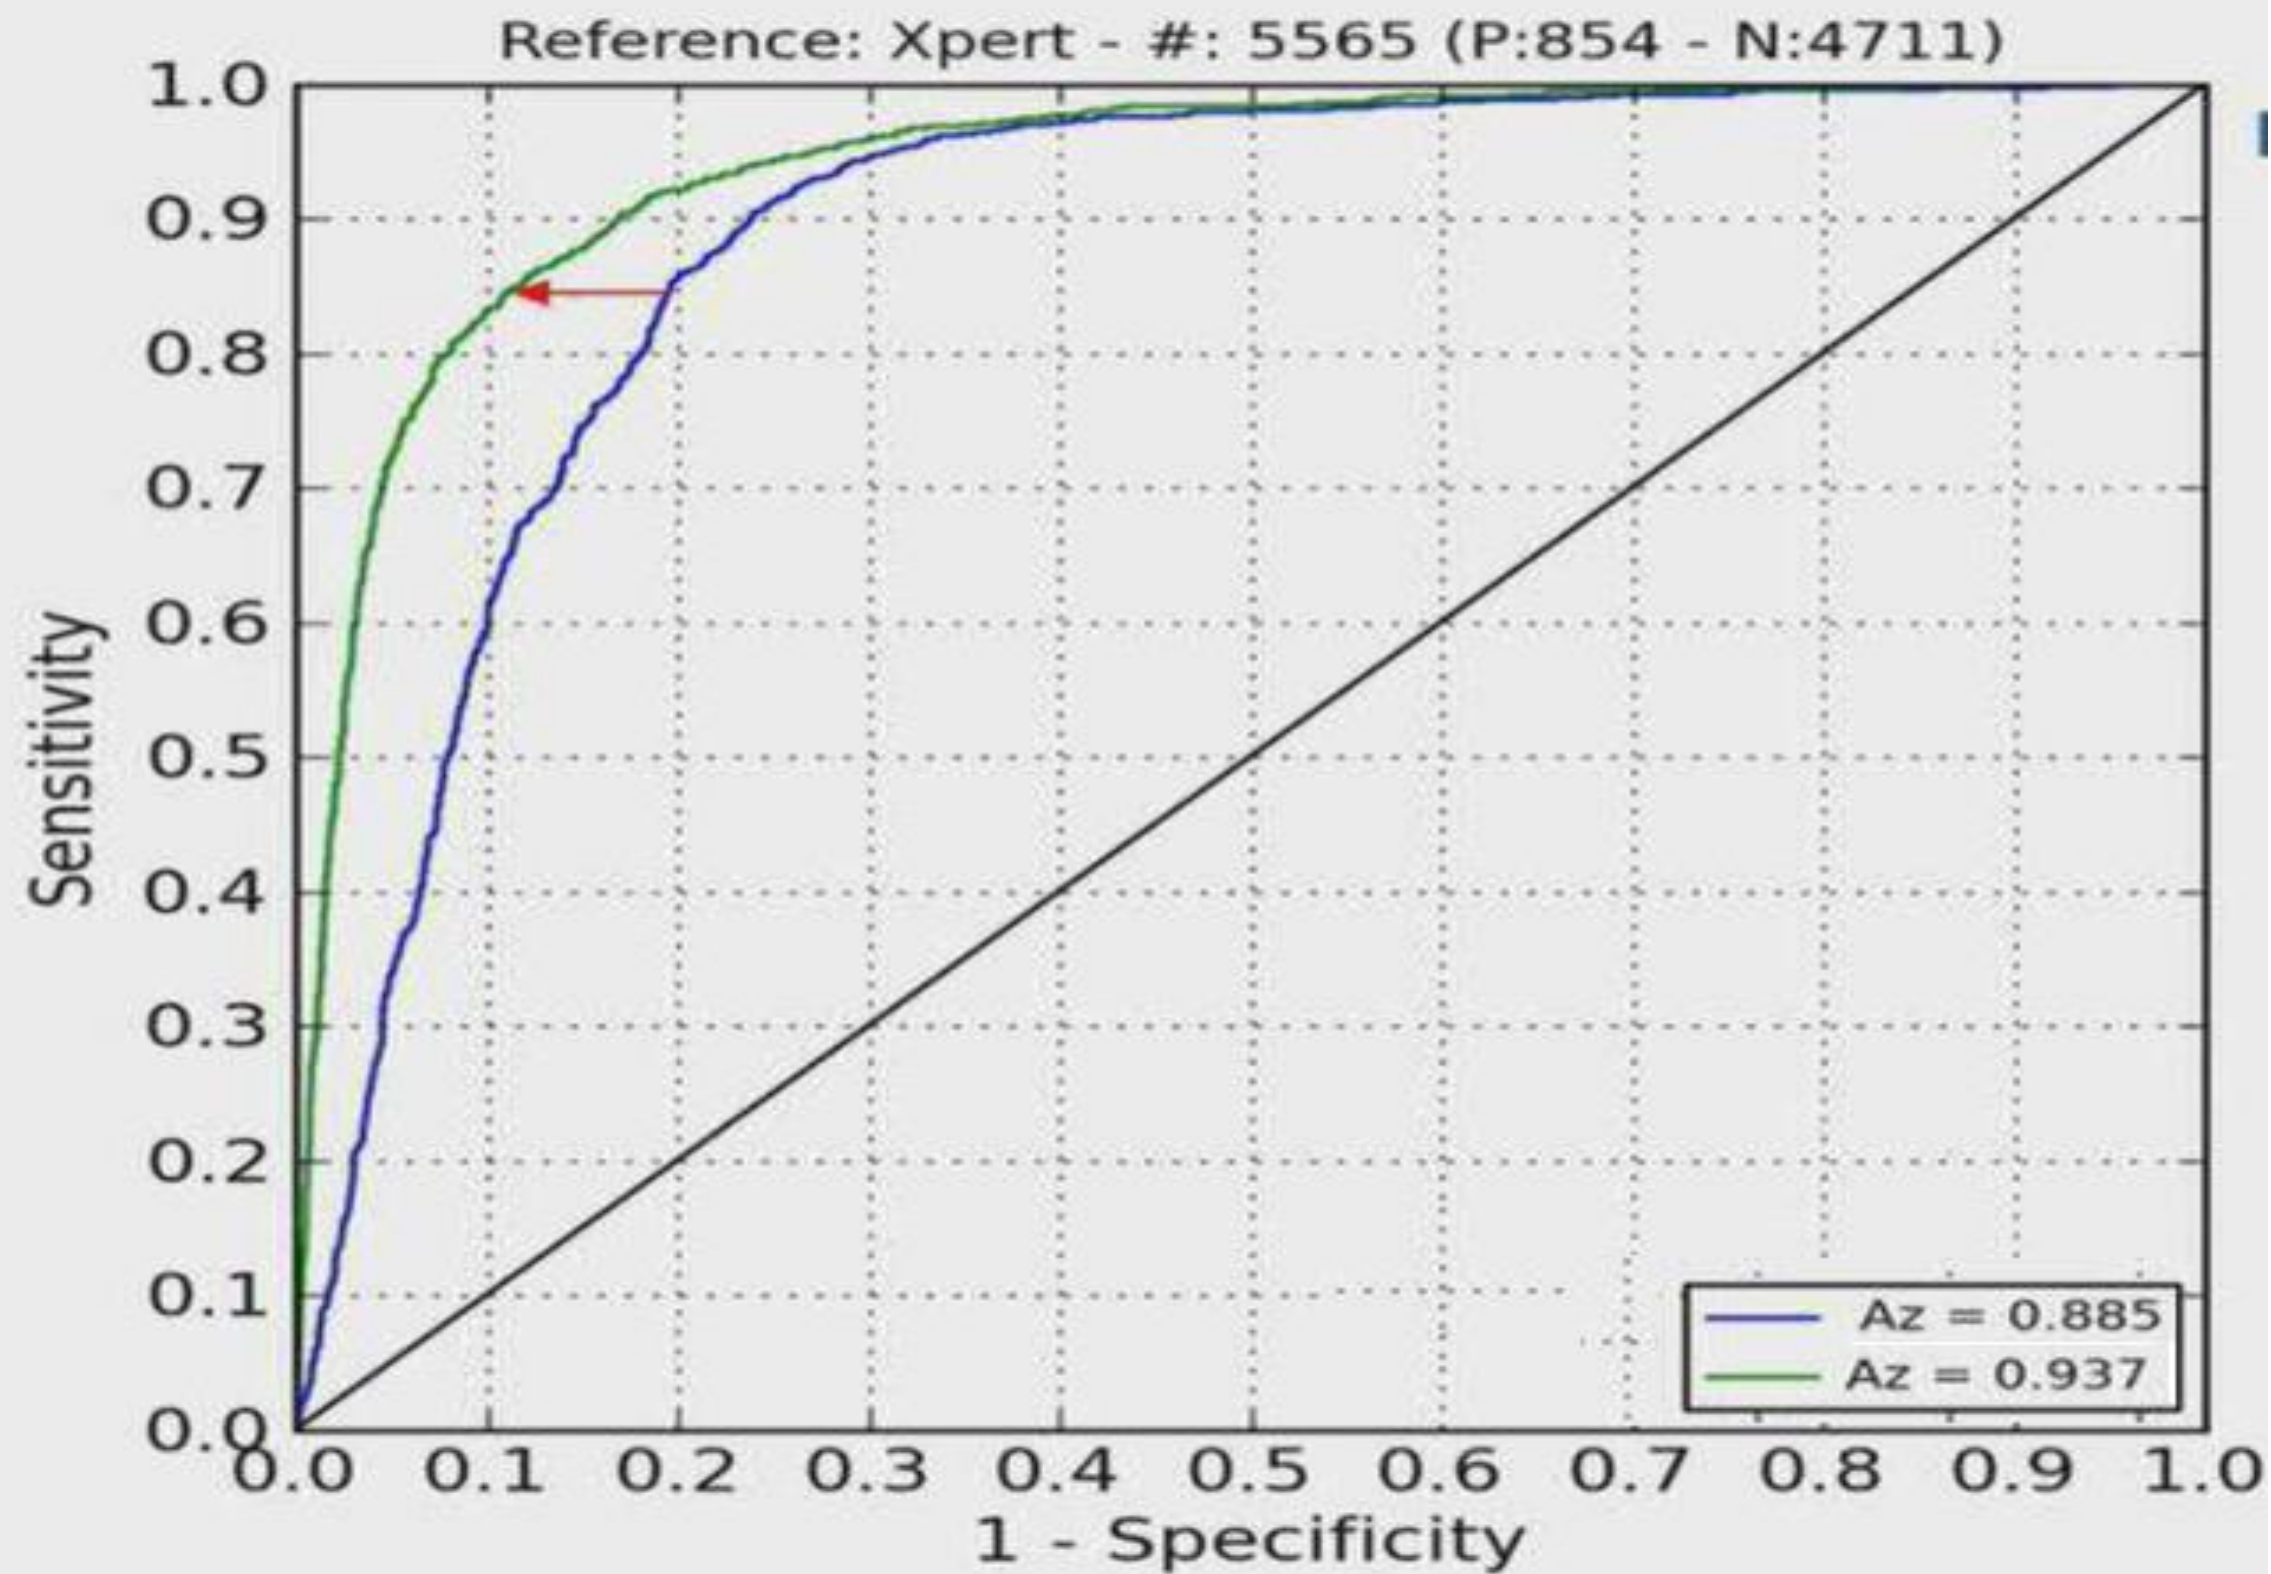

Conquer Critical Respiratory Conditions through AI/ML

Report

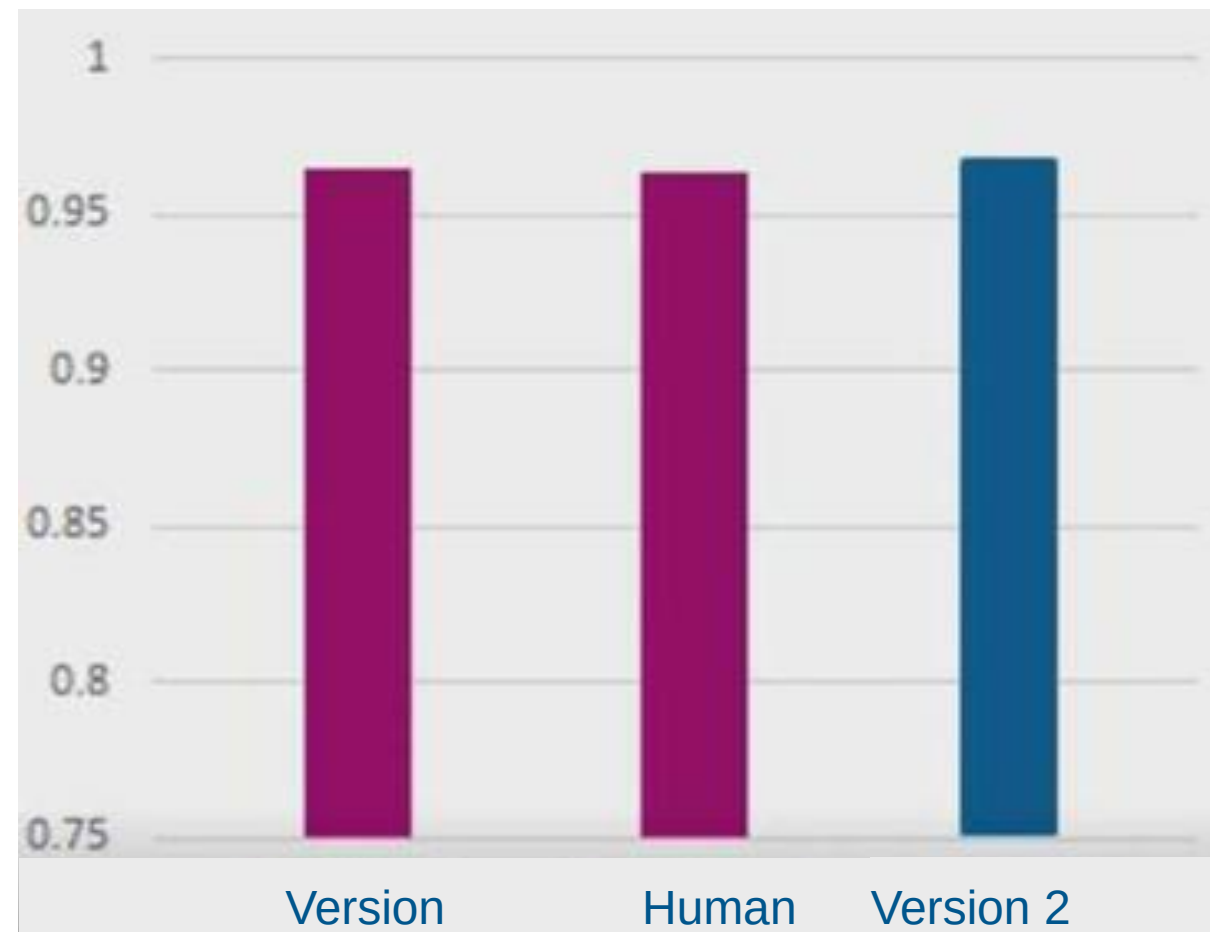

DecXpert Version 1 and 2 optimized to local population

DecXpert AI Algorithm For TB Vs Radiological Vs Bacteriological Reference

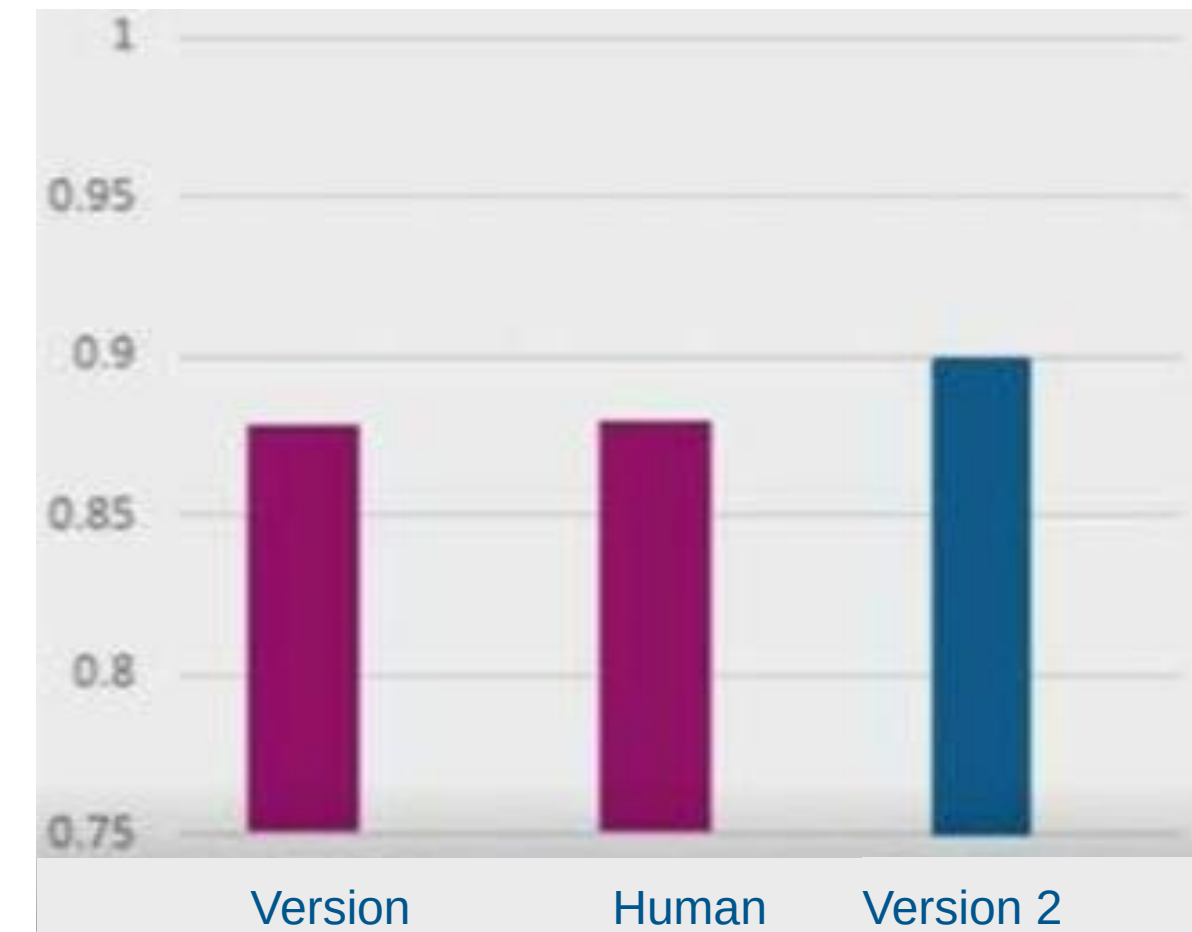

Radiological Reference

1

Comparable results from Readers

Bacteriological Reference

1

Comparable results from GeneXpert

Value Proposition

We can make a clinician read chest x rays faster and better!

- **98% interpretation accuracy – CDSCO Approved**
- **50% early detection of early diagnosis**

- **30% reduction in unnecessary recall**
- **10x faster chest x-ray reading**

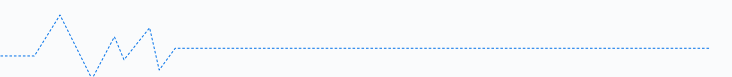

<https://www.nature.com/articles/s41746-023-00829-4>

- **4X more affordable**
- **Flexible pricing plans**

- **Vendor Agnostic**
- **Online and offline deployment model**
- **Very high workflow integration**

Current Stage

**Pilots at
9 hospitals**

10,000 + individual
patients screened

**Patients Prioritized
50,000 +**

40.1 %

More cases
identified, missed by
the Clinicians

**Turnaround time
10 Times
Faster**

Accuracy

98%

Regulatory Clearance

- Clinical Validation Study Published in Nature Medicine : [Know more](#)
- ISO 13485 Cleared
- Medical Device Class 2B Licensed – MD 3 Licensed
- Medical Device Class 2B Licensed – MD 5 Licensed

**Product Fully Licensed and Clinical Validation
Approved by Central Drugs Standard Control
Organization of India (CDSCO)**

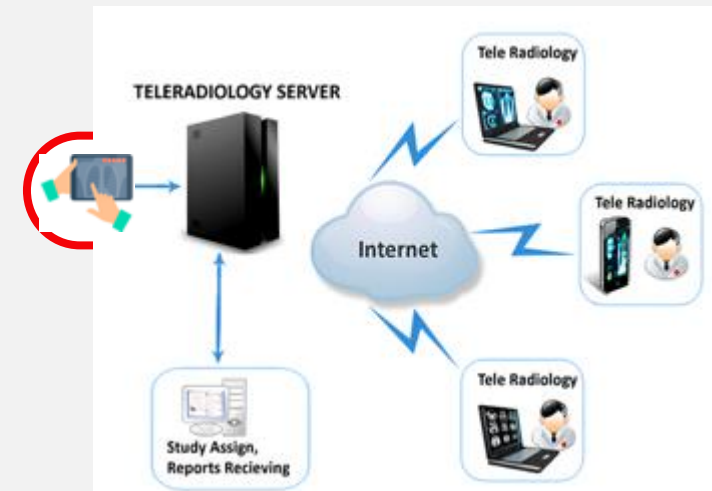

Market Segments

Digitally chest x ray machine vendors

Teleradiology Companies

Digitally enabled chest x ray diagnostic centers with chest x ray machines

Healthcare facility with in-house digital X-ray machine

Opportunity

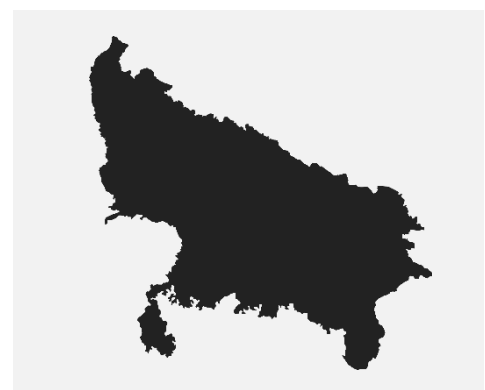

Total Addressable Digital X Ray Market Annually

Total Global **X-ray license** Market for DecXpert

Rs. **1000 Cr** Total Indian X-ray license Market for DecXpert

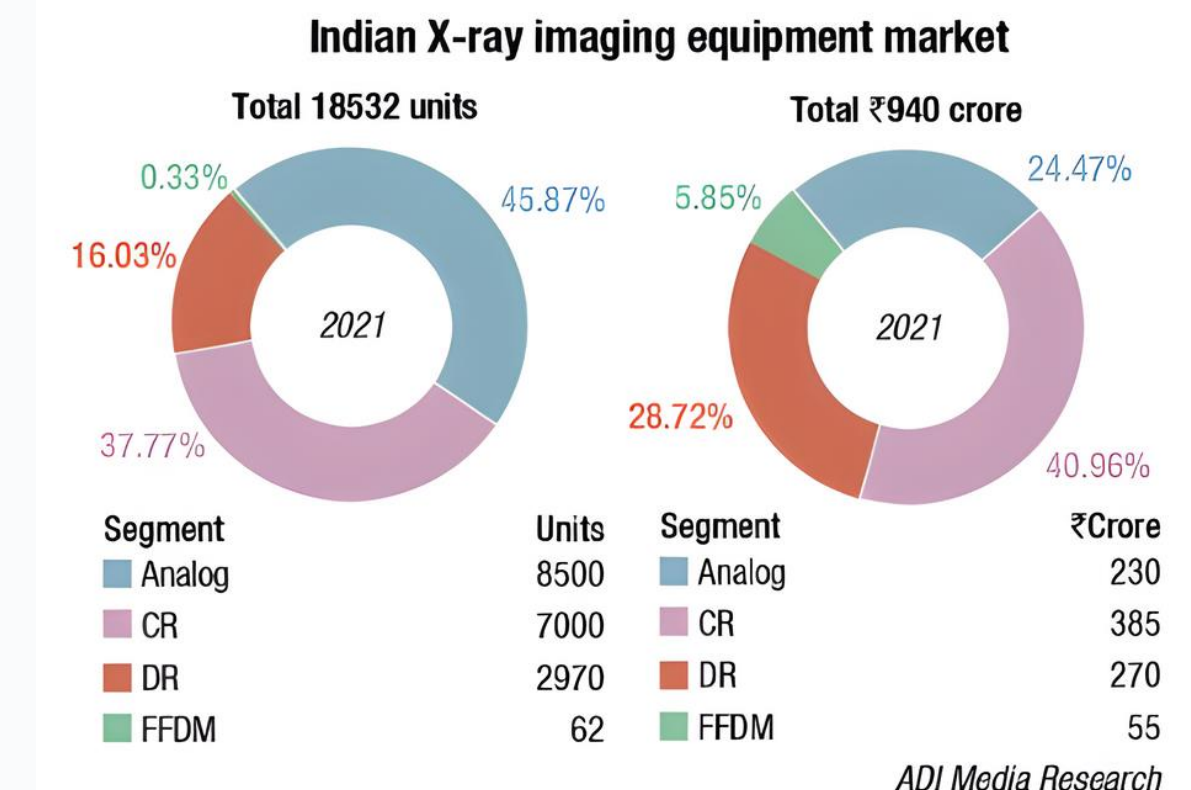

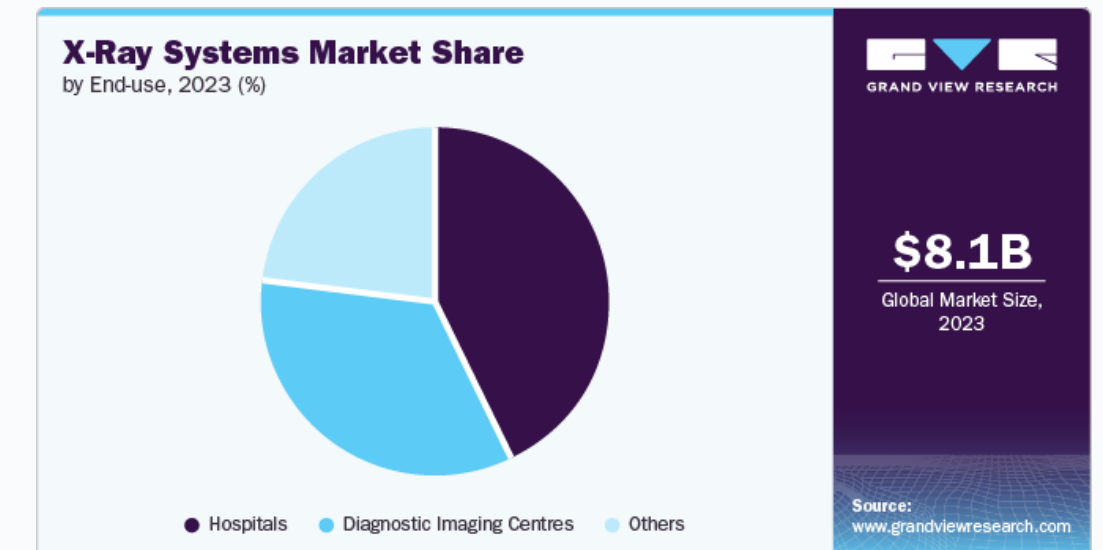

SOM/Beachhead Tri City Digital X ray machine vendors & Tele Radiology = **50 Cr**

Target segments

Top 10 Medium Size X Ray Machine Manufacturers in India

1. Carestream Health India
2. Agfa Healthcare
3. Canon Medical Systems
4. Allengers Medical Systems
5. Konica Minolta Healthcare
6. Mindray India
7. Trivitron Healthcare
8. Kiran Medical Systems
9. Skanray Technologies
10. Cura Health

Business model

B2B

● **License** (validated model)

- 3 years contract for 5k/ 14K/ 25K screenings
- Rs. 1/2/3 lacs (free tech support)
- Top up (like 50k for 10k screening)

● **Subscription** (future plans)

- Basic: Smaller diagnostic centers (upto 300 scans per month)
- Medium: Diagnostic centers (upto 900 scans per month)
- Advanced: Teleradiology plan (upto 60,000 scans per month)

Competitive Advantage

Superior Performance Amongst Competitors

	DecXpert	Qure.ai	Radiologist
High Accuracy	95%	94%	80%
High Affordability <i>cost per scan</i>	Rs. 10	Rs. 50– 80	Rs. 50– 80
Vendor agnostic	✓	X	✓
Resolution supported	High and Low Resolutions both	High Res only	High Res only
TAT	Instantly– In real time	Instantly– In real time	1 Week
Made for	India, MEA & South East Asia	North America, EU	North America, EU

Competitive Landscape Overview

	Direct Competition				Potential GTM Partners
Competitive Areas	Feature/Company	Dectrocel	Qure.ai	Deeptek	Endimension
Efficacy	Training Data	1 million patients data (60% Indian, 40% global)	1 million patients (90% global, 10% Indian)	1 million patients (80% global, 20% Indian)	Use case: Radiologist assistant tool
	Final Output/ Analysis	Severity Score - Quantified/ Quantized Output	Absolute- Yes/No	Absolute - Yes/No	Uses a more agentic AI approach, aiming for adaptability and decision-making beyond rule-based automation.
	Screening Accuracy	98% under clinical settings (Gold Standard)	At par	At par	
	Treatment Effectiveness Analysis	Yes	No	No	Cloud-based only, Web based application
	Ailments covered	18 ailments	18 ailments	4 ailments	Integrates across different disease modalities using multi model ai models on their platform
	Disease Focus	Current: Respiratory Future Expansion: Hepatopancreaticobiliary	Current: Respiratory Future Expansion: Neurology	Current: Respiratory Diseases	
Affordability	Pricing Model	Customised license model, Pay-as-you-go model/ Subscription model for all kind of customers- large volume and small volume	Only customised license model for high volume	Only customised license model for high volume	Subscription Plans for High Volume Clients Only
	Cost per scan (Computing and processing costs)	Rs 10	Rs 50-80 Approx	Rs 50-70 Approx	Premium Pricing, they charge the platform & convenience fee etc.
	Price per scan (Indicative)	Rs. 20 +	Rs 80	Rs 100	Regulatory barrier: LLM based Agentic AI cannot be used for diagnostics, only specialised multi-model algo can be used for screening/ can be used for screening/ diagnostic purposes
	Market Opportunity (Regions)	Low cost High volume markets (India, MEA, SEA, Africa)	Limited to High Margin- Low Volume Markets like US, EU	Limited to High Margin- Low Volume Markets like US, EU	
	Accessibility	Vendor Integration	Agnostic/ Compatible integration across all kind of CXR machines in the eco system- Digital and Non Digital, compatible with or without PACS systems	CXR machines which are only integratable with PACS system	CXR machines which are only integratable with PACS system
Core Technology		Processes both low resolution Jpeg, Jpg and High resolution Dicom Images	Processes Only High res Dicom Images	Processes Only High res Dicom Images	
Deployment Model		Online (Cloud) + Offline (on- premise)	Online (Cloud)	Online (Cloud)	
Workflow Integration		Very High	Medium	Medium	
Regulatory		CDSCO	CDSCO/FDA/CE Mark	CDSCO/FDA	

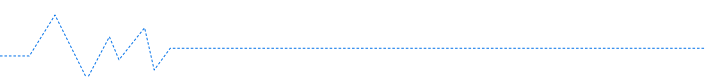

Dectrocel GSK Collaboration

Part of GSK Padup Acceleration Program

- **Mentored by Mr. Anil Iyer, ex- CCO, GSK**
- Outcome : In discussion with GSK for 12 months Corporate Engagement with GSK
- **Adoption of Dectrocel solution with 100k HCPs across India**
- Revenue opportunity of INR 1 Cr

Quarter 4 Product Launch : AI App for diagnosis of HEPATOPANCREATICOBILIARY DISEASES with Symptomatology / Medical History Taking

AI will act like a medical resident—takes a full history, generates a differential diagnosis, and recommends specific medications, labs, and imaging orders. Will be validated to specialist-level accuracy.

- Expected Product Launch : Quarter 4
- Product TRL : 10
- Current Stage : Manuscript in process to Public the Clinical Validation Results in a Peer Reviewed Journal

Product Roadmap

Current Stage

Chest X-ray AI

- Comprehensive respiratory screening
- 98% interpretation accuracy
- Reduced recall rates
- Faster processing
- Integrated in 80+ digital X-ray machines

Pipeline

CT Scan AI

- Advanced AI-based diagnostics
- Treatment response monitoring
- Leveraging current expertise
- Expanding into CT solutions

Future Expansion

Advanced Imaging

- Broader imaging modalities
- MRI diagnostics
- Ultrasound integration
- Cross-modality diagnostics

Screening & Treatment Response Monitoring Using Chest CT Scans

Roadmap:

2025

Milestone 1

Product Refinement & Scaling (6–12 months)

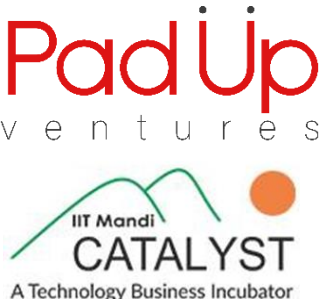

Milestone 2: Sales & Marketing Launch (6–12 months)

Milestone 3: Customer Base Growth (6–12 months) Onboard 10 Digital X ray Machine Vendor. Install DecXpert in 210 machines across these Vendors

Utilization Plan:

50% Sales and Marketing,
15% Ops & Admin
15% Product & Regulatory
5% Research & Development
5 %, Miscellaneous

Existing Cap table	
Shareholders	Percentage
Founders	93%
Incubators and Accelerators	6.13%
Other investors	0.86%

Milestones

Objectives	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8
Market Development								
Onboarding of 10 Digital X-ray Machine Vendors								
Onboarding of another 10 Digital X-ray Machine Vendors								
Deployment of DecXpert in 200 machines								
Upscaling Deployment across 800 machines								
Onsite Client Audits								
Events, Marketing, Branding, Vendor Facilitation								
Technical Upgradation of existing chest X- Ray								
Web/ mobile interface Upgrade								
Software version upgrades based on existing market feedback								
Software Compatibility Checks								
AI Product Development Pipeline/ Launch								
Hepatopancreaticobiliary (HPB) AI Expansion launch in app store								
Hepatopancreaticobiliary (HPB) AI commercialisation								
CT Scan AI Development								
CT Scan AI- Clinical Validation & Deployment								
Regulatory								
Patenting of Normalization Technology								
CT Scan Clinical Validation								
CT Scan Clinical Results Peer reviewed Publication								
CT Scan ISO 13485								
CT Scan CDSCO Test Licence (MD3)								
CT Scan CDSCO Licence (MD5)								
Future Growth								
Strategic Growth & Funding Series A								
Close planning for FDA- finalise MEA, SEA, US plans
