

TENSOR DYNAMICS

CLIMATE. DATA. ANALYTICS.

Businesses in Renewable Power Sector faces substantial financial losses every hour due to weather dynamics.

Furthermore, fluctuations in power grid due to weather dynamics causes instability and imposes a National security threat.

Power sector facing losses of

\$3.2 Billions

every year, just in India.

\$800 Millions

Renewable energy
DSM Penalties.

\$1.3 Billion

Demand & Price
fluctuations.

\$1.1 Billion

Power Transmission
Infrastructure losses.

The problem is globally escalating rapidly with:

- 1. Increasing Renewable Energy Penetration.**
- 2. Increasing extreme events due to Climate Change.**

Affected **Businesses**

- I. RE Individual Power Producers (IPPs)
- II. RE Aggregators
- III. Grid controllers
- IV. CMS & Scada companies
- V. Power transmission companies
- VI. Power DisComs
- VII. Load dispatch centres
- VIII. Forecast service providers
- IX. Qualified Coordinating agencies (QCA)
- X. Analytics companies
- XI. Power trading platforms
- XII. Digital twins
- & Many More

No Real-Time Analysis

GENERIC WEATHER API

- does not meet the requirements set of real-time data for Power sector.

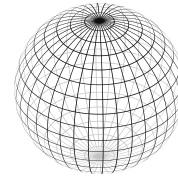

DATED ANALYTICS

- Unavailability of real-time dynamic weather data.

NO ASSET MONITORING

- Poor visualisation tools unable to pin with dynamics weather conditions.

SOLUTION

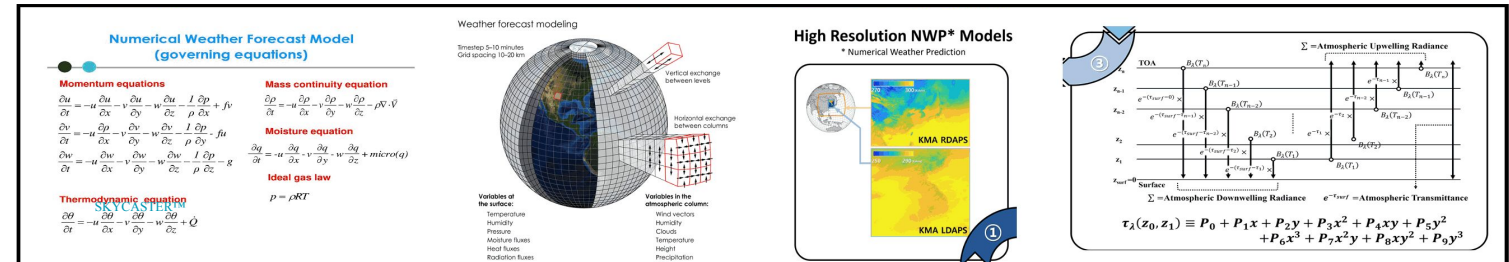

SKYCASTER

An integrated Weather data, Analytics & GIS platform for Power sector.

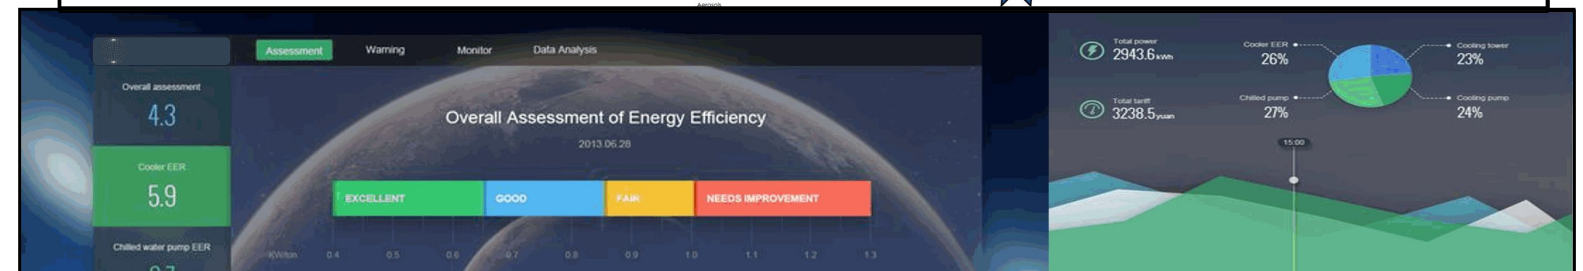

Accurate Predictive
Weather API

Dynamic
Weather API

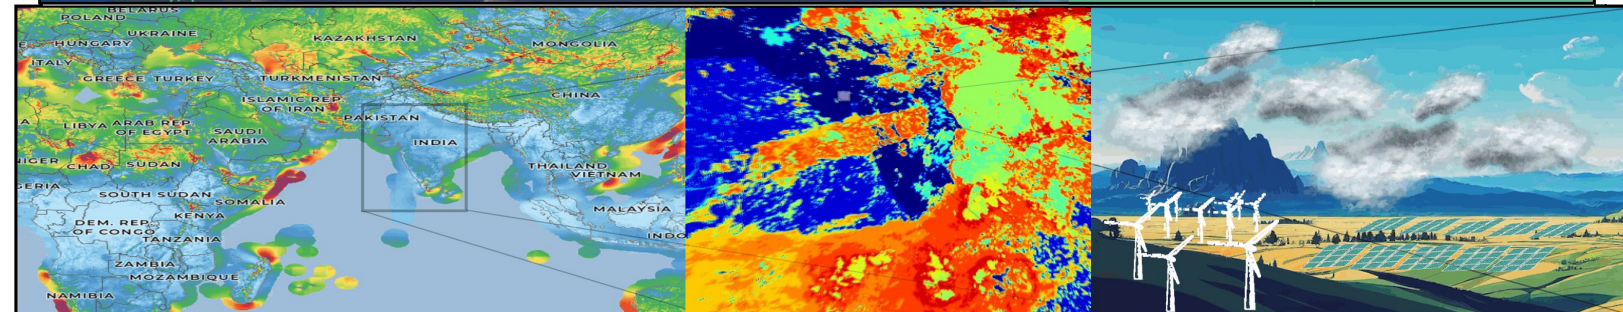

Make actionable insights
with Generative AI.

MARKET SIZE

Total Addressable Market

- To Grow to \$4.6 Billion by 2029 ([Report](#))
 - All sectors including Renewable

Serviceable Addressable Market

- Renewable Energy Market (GLOBAL)
 - To grow to 1.2 billion by 2030

Serviceable Obtainable Market

- Renewable Energy Data, Analytics & visualisation (India)
 - To grow to 70 Million by 2030

OUR CLIENTS

AWARDS & ACHIEVEMENTS

Recipient of the first place in the 2023 Geospatial Hackathon, jointly hosted by the Department of Science & Technology and Microsoft.

Introducing the inaugural Indian Renewable Energy Round the Clock Map of India in collaboration with Survey of India and IMD.

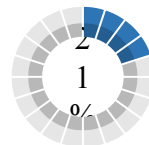

Projections

(INR)***	Year1	Year2	Year3	Year4
Gross Revenue	52,00,000.0	3,60,00,000.0	37,44,00,000.0	91,00,22,000.0
CAPEX	86,80,000.0	2,19,96,000.0	3,77,55,200.0	4,50,70,000.0
EBITDA	(1,03,40,000.0)	43,26,000.0	32,59,79,200.0	77,48,12,000.0
Cash Flow	(2,30,20,000.0)	(4,06,90,000.0)	24,75,34,000.0	68,46,72,000.0

Founder's 2030 vision

“SKYCASTER will serve as a unique global SaaS platform for Power Sector optimized with real time weather dynamics, accurate RE generation/demand response and optimized pricing for open access trading of Power across Nations ”

70% of Total world energy generation via RE

India trading 450GW installed RE across borders

Climate change causing extreme weather events & huge losses in power sector
